Camp Package 1

Parameters	Result	Unit	Biological Reference Interval
Blood group ABO and RH Factor			
ABO Group <i>Manual Hemagglutination</i>	O		
Rh Type <i>Manual Hemagglutination</i>	Positive		

Interpretation

- The blood group is identified by antigens and antibodies present in the blood. Antigens are protein molecules found on the surface of red blood cells. Antibodies are found in plasma. To determine the blood group, red cells are mixed with different antibody solutions to give A, B, O, or AB. The test is performed by both forward as well as reverse grouping methods.
