Test : **BLOOD GROUP & RH TYPING*** , Edta Whole Blood

Test Description	Result	Units	Reference Range
BLOOD GROUP & RH TYPING*	B POSITIVE		

Comment

Interpretation Notes:

Blood Group: A blood type (also called a blood group) is a classification of blood based on the presence and absence of antibodies and also based on the presence or absence of inherited antigenic substances on the surface of red blood

cells (RBCs). Determination of blood type is essential so that patients should ideally receive their own blood or type-specific blood products to minimize the chance of a transfusion reaction.
